Dear Reader:

I am writing to inform you of some inconsistencies in the Bureau of Land Management's *Final Wild and Scenic River Eligibility Report*, which need to be clarified or corrected. The *Report* was prepared in conjunction with the revisions of the Kremmling and Glenwood Springs Resource Management Plans/Environmental Impact Statements (RMPs/EISs).

As part of the process of revising the Kremmling and Glenwood Springs RMPs, stream and river segments on BLM-administered public lands were analyzed to determine their eligibility for inclusion in the National Wild and Scenic Rivers System (NWSRS). A contractor working for the BLM produced the eligibility report for the Kremmling and Glenwood Springs field offices in March 2007. After the report was completed, we determined that some modifications were appropriate, and have prepared an errata document, which is enclosed.

Work on the Kremmling and Glenwood RMPs/EISs revision continues. The segments determined to be eligible are being analyzed as part of the RMP revision process, to determine if those segments are suitable for recommendation as additions to the NWSRS. The stream and river segments discussed in the eligibility report will be analyzed in the draft RMP under a range of alternatives prescribed by BLM policy.

We look forward to your review and comments on those alternatives, and on the alternatives for managing other public land resources and values, when the draft RMP is published. If you have questions or comments, please contact me by letter at the letterhead address or by email, Dave_Stout@blm.gov, so that your response can be retained for the RMP's administrative record.

Sincerely,

David Stout
Field Manager
